

Release 1.0 Acceptance Document

EasyTrage, TrageTeam

Release 1, 3/16/18

Functional Features

- Secure user registration and authentication system with encryption and JSON web tokens
- Table view of data on coin prices, pairs, and exchanges
- Arbitrage trade suggestions for XRP (Ripple) as the intermediary transfer currency across all exchanges accessible from the US with trade volume of >100k USD a day per Ripple pair.
- Editable account settings where user may change their password or input API keys to store in our backend database.
- Detailed trade information including trade and withdrawal fees, prices, expected profit, etc
- Interface for entering desired base currency trade amount and deposit address of exchange currency on the secondary exchange of a arbitrage trade process which persists.

Known Issues

- Occasionally hitting 'Tab' after entering the email on login makes the app display 'invalid email' even if the email is valid (although it doesn't affect the functionality, the alert is just displayed when it shouldn't be)
- Decreasing window size cuts off content in the modal when the user clicks on the 'trade' button instead of resizing it dynamically
- Sometimes, especially on the landing page, the browser console shows 'Can only update a mounted or mounting component' warnings
